

Sustainable Procurement Policy

Accelerating responsible business practices with our supply chain to propel sustainable regional aviation

As the world leader in regional aviation, ATR is committed to contributing to a more sustainable, responsible, and inclusive aerospace industry. This ambition lies at the heart of our corporate strategy and guides the way we design, manufacture, and support our aircraft throughout their entire life cycle.

Over 1,000 direct and indirect suppliers form our supply chain, and they play a decisive role in the design, production, in-service support, and end-of-life management of our products.

Their engagement is vital to:

- ④ **Ensure the performance of our products and services**
- ④ **Manage risks effectively**
- ④ **Foster innovation**
- ④ **Strengthen our competitiveness**
- ④ **Achieve our sustainability objectives**

ATR is implementing a Sustainable Procurement strategy built around four pillars:

They reflect our vision of a collaboration based on transparency, sustainable performance, innovation, and strict adherence to quality and safety requirements. They form the framework on which we will rely to build, together with our suppliers, a resilient and responsible supply chain.

Sustainable Procurement Policy

RELATIONSHIPS

Building responsible, transparent, and high-performing partnerships

In a demanding and constantly evolving aerospace environment, strong supplier relationships are essential to ensuring regulatory compliance, operational reliability, competitiveness, and the long-term sustainability of our products and services.

We are committed to:

- 1 Promoting clear, honest, and transparent communication, establishing shared expectations and maintaining regular dialogue.
- 2 Identifying and anticipating strategic, operational, and sustainability-related risks to strengthen the robustness of our supply chain.
- 3 Working collaboratively with suppliers to develop innovative solutions that meet customers' needs while upholding our commitments to quality, safety, and sustainability.

INDUSTRIAL EXCELLENCE

Ensuring reliable, high-quality products and services

ATR's culture of industrial excellence is a cornerstone of flight safety, product reliability, and customer satisfaction. It relies on strict compliance with quality standards, regulatory requirements, and industrial lead times.

We are committed to:

- 1 Requiring from our suppliers strict adherence to delivery schedules to ensure stability in our operations and production flow.
- 2 Upholding the highest quality standards to ensure the performance of delivered products and provided services.
- 3 Promoting a "Quality First" culture based on process control, continuous improvement, and problem-solving behaviour.

Sustainable Procurement Policy

COMPETITIVENESS

Creating long-term, sustainable value

The aerospace market is characterised by strong economic pressure and rising expectations regarding performance, parts availability, quality, and safety. Innovation is a key driver for strengthening our leadership position and creating long-term, sustainable value for our customers, our suppliers, and the entire ecosystem.

We are committed to:

- 1 Working closely with our suppliers to maintain a high level of competitiveness across the full product life cycle.
- 2 Supporting the profitability of our customers and operators through high-performance, safe, and economically optimised products and services.
- 3 Leveraging technical, industrial, and digital innovation to continually enhance the quality, safety, and sustainability of our solutions.

RESPONSIBLE SOURCING

Embedding social and environmental responsibility at the heart of our supply chain

A responsible supply chain, fully aligned with international sustainability standards, is key to support the environmental and societal transformation of the aviation sector. In line with ATR's sustainability strategy, our suppliers are fully integrated into this approach.

We are committed to:

- 1 Reducing the environmental and climate footprint of our supply chain by promoting cleaner technologies and energy efficiency,
- 2 Ensuring respect for social standards and human rights, in line with international requirements and applicable regulations, including matters related to conflict minerals.
- 3 Promoting the highest standards of ethics and compliance across the supply chain, particularly regarding transparency and anti-corruption.
